

PPE PROGRAM COMPLIANCE CHECKLIST

THINGS TO LOOK FOR	N/A	YES	NO	REMARKS/ ACTION TAKEN/DATE
Employers are assessing the workplace to determine if hazards that require the use of personal protective equipment (for example, head, eye, face, hand, or foot protection) are present or likely to be present.				
If hazards or the likelihood of hazards are found, employers are selecting and having affected employees use properly fitted personal protective equipment suitable for protection from these hazards.				
Employees have been trained on PPE procedures, that is, what PPE is necessary for a job task, when they need it, and how to properly adjust it.				
Protective goggles or face shields are provided and worn where there is any danger of flying particles or corrosive materials.				
Approved safety glasses are required to be worn at all times in areas where there is a risk of eye injuries such as punctures, abrasions, contusions, or burns.				
Employees who need corrective lenses (glasses or contacts) in working environments having harmful exposures, are required to wear only approved safety glasses, protective goggles, or use other medically approved precautionary procedures.				
Protective gloves, aprons, shields, or other means are provided and required where employees could be cut or where there is reasonably anticipated exposure to corrosive liquids, chemicals, blood, or other potentially infectious materials. See CFR 1910.1030(b) for the definition of "potentially infectious materials."				
Hard hats are provided and worn where danger of falling objects exists.				
Hard hats are inspected periodically for damage to the shell and suspension system.				
Appropriate foot protection is required where there is the risk of foot injuries from hot, corrosive, or poisonous substances, falling objects, and crushing or penetrating actions.				
Approved respirators are provided for regular or emergency use where needed.				
All protective equipment is maintained in a sanitary condition and ready for use.				
Eye wash facilities and a quick drench shower are within the work area where employees are exposed to injurious corrosive materials. Where special equipment is needed for electrical workers, it is available.				
Where food or beverages are consumed on the premises, they are consumed in areas where there is no exposure to toxic material, blood, or other potentially infectious materials.				
Protection against the effects of occupational noise exposure is provided when sound levels exceed those of the OSHA noise standard.				
Adequate work procedures, protective clothing, and equipment is provided and used when cleaning up spilled toxic or otherwise hazardous materials or liquids.				
There are appropriate procedures in place for disposing of or decontaminating personal protective equipment contaminated with, or reasonably anticipated to be contaminated with, blood or other potentially infectious materials.
